

## **AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in this application:

## **LISTING OF CLAIMS:**

Claims 1 to 13. (Canceled).

14. (Currently Amended) A system, comprising:  
drive units arranged on a movable part, each drive unit powered in a contactless manner by an inductive coupling to at least one primary conductor;  
wherein the at least one primary conductor ~~[[and]]~~ is removably fixed to the drive units ~~are fixed relative to each other~~ on the movable part, the at least one primary conductor being provided in at least one of (a) an indentation and (b) a cable duct of the drive unit.

15. (Previously Presented) The system according to claim 14, wherein the movable part includes at least one of (a) a turntable and (b) a linear drive.

16. (Previously Presented) The system according to claim 14, wherein the movable part is one of (a) rotationally mounted and (b) linearly movable.

17. (Previously Presented) The system according to claim 14, wherein the primary conductor is adapted to power the drive units in series.

18. (Previously Presented) The system according to claim 14, wherein at least one of (a) the primary conductor is supplied with energy in a contactless manner by stationary coil cores including at least one coil winding and (b) the primary conductor is supplied with energy by a loop wire.

19. (Previously Presented) The system according to claim 14, wherein the primary conductor is arranged as a closed loop.

20. (Previously Presented) The system according to claim 14, wherein at least one drive unit includes an electric motor and an electronic circuit adapted to power the electric motor, the drive unit powered inductively.

21. (Previously Presented) The system according to claim 14, wherein a primary conductor is provided on the drive unit such that an inductive coupling to a secondary winding included in the drive unit is providable.

Claim 22. (Canceled).

23. (Previously Presented) The system according to claim 14, wherein at least one secondary winding is wound around at least one of (a) a U-shaped and (b) an E-shaped core.

24. (Previously Presented) The system according to claim 14, wherein the primary conductors are at least one of (a) partially encapsulated and (b) protected by a cover.

25. (Previously Presented) The system according to claim 14, wherein at least one drive unit is arranged at least one of (a) impervious, (b) smooth on an outer surface, (c) to provide a high degree of protection and (d) for use in at least one of (a) wet areas and (b) aseptic areas.

26. (Previously Presented) The system according to claim 14, wherein the drive unit does not include a plug-and-socket connector or other electrical connection terminals on its exterior.

27. (Previously Presented) The system according to claim 14, wherein the drive unit is arranged such that information is transmittable by modulating higher-frequency signals onto the primary conductor.
